

Ausy is a multidiscipline engineering company present in the market since 1978.

AUSY has available highly specialized Managers, Engineers and Technical personnel, trained by multi-national Companies, that have been brought together to form a team capable of delivering "Global Services" to the process industries such as chemical and petrochemical plant, refineries, pharmaceutical factories, etc.

The below listed activities are usually performed by Ausy

- Feasibility study including investment cost's evaluation
- Multi-disciplines engineering including stress analysis
- Basic Engineering Design Package (BEDP)
- Detail engineering and FEED package
- Detail engineering for revamping of existing plants, including verification and/or calculation of foundation and steel structure
- Engineering documentation in accordance to PED directive
- Building automation
- System integrator and supplier of SCADA system
- Automation system for pharmaceutical industry
- Environmental monitoring system
- Site assistance and supervision

From project acquisition to completion, Ausy works closely with the Customer to guarantee solutions that fit, every time with the required performance

The high standards of quality and service are ensured by the high professional standards of the Managers, Engineers and Technical personnel due to the extensive AUSY experience in:

- Electro-instrumentation engineering
- Control room engineering including DCS systems
- Panel design and fabrication
- Industrial micro-processor control system
- SCADA system
- Emergency shut-down and BMS system (e.g. PLC)

The design and completion of a plant requires an experienced, professional approach, and large investments of capital.

In this regard, Ausy is capable to provide a large range of responsibilities for the project, while assuring up to date quality standards built around established rules and regulations.

Specialized applications are usually applied in the following fields

- Chemical and petrochemical
- Central heating and cooling plants
- Water treatment
- Energy management

Product leaders

For many years, AUSY is a technology leader for automation, remote control and plant's monitoring, particularly in the pharmaceutical area has been the Italian partner of international system's manufacturer, leader for automation and remote control for plant's monitoring.

In 1998, AUSY became the Italian distributor Panorama SCADA system, the leading human-machine interface (HMI) Software in the HMI market, recognized by Microsoft with its BackOffice™ certification.

This combination guarantees AUSY's Clients that they will always get the best available technologies in the industry.

AUSY SCADA system, allow an easy integration with existing physical plants and installation, both on a hardware and software level.

The system is simple but very strong from functional point of view, easy to install and compatible with many diversified applications.

Quality system certificate

In 1998, AUSY obtained the UNI EN ISO 9001 certification of quality systems from Det Norske Veritas for:

- Basic and detailed engineering
- Supply, installation and after sales service of industrial automation and control systems
- Mechanical detail engineering
